

ASSIGNMENT 1

1

Authentication Form

Create a Python program that asks the user to enter an email address and a password.

Requirements

- Use the predefined email student@rit.edu and password Python123 as the correct credentials.
- Display "Login successful" when both values are correct.
- Display "Incorrect email" when only the email is incorrect.
- Display "Incorrect password" when the email is correct but the password is incorrect.
- Display "Incorrect email and password" when both values are incorrect.

Starter Code

```
correct_email = "student@rit.edu"
correct_password = "Python123"

email = input("Enter your email: ")
password = input("Enter your password: ")

# Write your conditional statements below
```

2**Student Grade Checker**

Create a Python program that asks the user to enter a score from 0 to 100.

Requirements

- Display "Excellent" for scores from 90 to 100.
- Display "Good" for scores from 70 to 89.
- Display "Passed" for scores from 50 to 69.
- Display "Failed" for scores below 50.
- Display "Invalid score" when the entered value is below 0 or above 100.

Starter Code

```
score = int(input("Enter the student score: "))  
  
# Write your conditional statements below
```

3**Store Discount System**

Create a Python program that asks the user to enter the total purchase amount.

Requirements

- Apply a 20% discount when the purchase amount is 100 euros or more.
- Apply a 10% discount when the purchase amount is between 50 and 99.99 euros.
- Do not apply a discount when the purchase amount is below 50 euros.
- Display "Invalid amount" when the user enters a negative value.
- Display the original amount, discount percentage, discount value, and final price.

Starter Code

```
total_price = float(input("Enter the total purchase amount: "))  
  
# Write your conditional statements below
```
